

The Week That Was: 2015-03-21 (March 21, 2015)
Brought to You by SEPP (www.SEPP.org)
The Science and Environmental Policy Project

#####

Quote of the Week: *One of the greatest benefits that science confers upon those who understand its spirit is that it enables them to live without the delusive support of subjective certainty. That is why science cannot favour persecution.*— Bertrand Russell, *The Impact of Science on Society*. New York; Routledge, 1985, p. 102. [H/t Paul MacRae]

#####

Number of the Week: 8.2%

#####

THIS WEEK:

By Ken Haapala, President, Science and Environmental Policy Project (SEPP)

Certainty: The above quote from logician Bertrand Russell is part of his extensive writings in praise of science and its capability to calculate probability of error based upon evidence, often coming from repeated trials. Not religious, Russell often differentiated between scientists, religious or not, as a group, and politicians. Over the past few decades the UN Intergovernmental Panel on Climate Change (IPCC) transformed from an organization for science to one controlled by politicians and expressing a cult-like belief – the belief that human emissions of carbon dioxide, and other greenhouse gases, are causing unprecedented and dangerous global warming. In the process, the IPCC has turned probability analysis from objective frequency testing to guesswork. The assertions of certainty about human cause in the Summary for Policymakers (SPM) of the Fifth Assessment Report (AR-5) is but the latest example.

As discussed in the March 14 and March 7 TWTWs, MIT Professor Emeritus of Atmospheric Sciences Richard Lindzen considers the shift in terminology by the Climate Establishment from “global warming” to “climate change” indicates the silliness of the entire issue of human cause of climate change. To him, climate change has been occurring since the earth was formed and now this naturally occurring course is taken as evidence of doom. The March 14 TWTW gave one example of natural climate change, a study of borings of marine sediments off the coast of north China, which date back 1.4 billion years.

The IPCC and organizations that follow it, such as the US Climate Change Research Program (USCCRP) are being forced to make silly claims because they have failed to study and understand the natural causes of climate change – natural causes that are contributing to the current temperature trend of no trend, which contradict prior assessments by the IPCC, particularly the Fourth Assessment Report (AR-4) in 2007. It was in 2007 that the IPCC received the Nobel Peace Prize, which the IPCC proudly posts on its web site. Nature is turning the certainty expressed by the IPCC on its head. See the March 7 and 14 TWTWs at <http://www.sepp.org/the-week-that-was.cfm> and http://www.ipcc.ch/publications_and_data/ar4/syr/en/spm.html

Executive Order: Expressing great certainty in the pronouncements of the IPCC and the USCCRP, President Obama used his executive powers to order a reduction of federal government greenhouse gas emissions (CO₂) by 40 percent below 2008 levels, over the next decade. The US government is the largest consumer of energy in the country. He also set the goal that the government will get 30 percent of its power from renewable sources over the next 10 years.

According to reports, Obama announced this when saying: “Today, America is going to be once again leading by example,” in brief remarks during a Department of Energy roundtable with leaders from the federal contractors and suppliers. Also, the “White House said the move would help reach a non-binding commitment Obama signed with China in November 2014 to curb U.S. emissions at least 26 percent below 2005 levels by 2025.”

From the prospective of Washington, the thought of a 40 percent lowering in CO2 emissions and 30% renewable power is almost amusing. Such a directive will include computers, communications, elevators, moving stairs, heating, cooling, subways, etc. Other than hydro, which is impractical for Washington, renewable sources are unreliable and use massive land areas. Will this be a return of the Washington of the 1950s when few people worked in the summer? Will it apply to subways that move federal employees? Will it require denuding the Washington region of its trees? Offshore wind is expensive and has not been demonstrated to be reliable.

Amusement aside, the consequences of this executive order to military complexes such as Norfolk-Newport News is staggering, and may result in a real threat to national defense. See links under Expanding the Orthodoxy.

Renewable Power in the UK: Writing for the Centre for Policy Studies, Robert Darwall outlines the damage that renewable subsidies are creating in the UK. Of course, his analysis is disputed by the Greens, also presented. Darwall’s presentation of the experience of Edison is instructive.

Edison was an inventor, an engineer and an entrepreneur. He successfully established the first electrical grid, in New York City, powered by coal. Edison had the ability to recognize what was needed and invented it, if necessary. Many government leaders saw the benefits of reliable electricity, and demanded it in their cities.

Later, Edison failed because he failed to realize the market advantages of AC power over DC power. Some were hurt by this failure, but the public benefited when one system was replaced by a superior system. Politicians replacing a superior, reliable system with an inferior, unreliable system hurt the public. Only those who take advantage of inferior thinking benefit. See links under Questioning European Green and Subsidies and Mandates Forever.

EPA Demands: A revolt is occurring against EPA demands that States produce a clean power plan. Senior Republican leaders in Congress are stating that the EPA requirement is unconstitutional and illegal. In Congressional testimony, Lawrence Tribe, a constitutional law scholar, who is decidedly very liberal, up to this point, and who mentored President Obama, declared that the EPA energy plan for existing coal-fired power plants is unconstitutional. A number of states are indicating they will ignore EPA demands. According to reports, starting next year, the Federal Emergency Management Agency (FEMA) will approve “disaster preparedness funds only for states whose governors approve hazard mitigation plans that address climate change” (read comply with EPA demands).

When similar show-downs occurred with the parties in the White House and control of Congress switched, many major media sources screamed a constitutional crisis. They are strangely quiet now. Apparently, to them, the authority of the executive branch depends on the political party of that executive. See links under The Political Games Continue, Litigation Issues, and EPA and other Regulators on the March

The Third Way: Probably without intending to do so, President Obama may have provided a third way out of a show-down over EPA demands. He announced that America will lead by example. The states could respond to EPA demands by declaring “let the federal government lead by example. Let Washington demonstrate how quickly and effectively it can implement President Obama’s Executive Order – with minimal costs.

In a Nutshell: Roger Pielke, Jr, falsely accused of being a climate change denier by those engaged in the Witch Hunt, communicated a summary of the movie Merchants of Doubt: “How a 90 year-old man and a few dead friends fool the stupid American public, end of civilization results.” These scientists insisted on the IPCC conforming to the principles of science. No wonder the Climate Establishment fears them. It may lose the billions of dollars it is receiving from the federal government.

The movie Merchants of Doubt is failing at the box office. Writing in Climate Etc. Judith Curry expressed hope this may be the end of such claims. Curry concludes: “The bottom line here is that very sloppy history and social science research ([by authors] Oreskes and Conway) is being used to justify *ad hominem* attacks against scientists that do not support the prevailing consensus. I find this reprehensible.”

See links under Seeking a Common Ground, and Communicating Better to the Public – Go Personal.

Role of Science: On her web site, Climate Etc., Judith Curry presents a thoughtful essay on science and society by William Hooke. Hooke is Associate Executive Director of the American Meteorological Society. He discusses the beginnings of the National Science Foundation and how social stresses may be changing its role in American society.

“How have we faced these new stresses? Unfortunately, many scientists have responded by resorting to advocacy. Worse, we’ve too often dumbed down our lobbying until it’s little more than simplistic, orchestrated, self-serving pleas for increased research funding, accompanied at times by the merest smidgen of supporting argument.

“At the same time, as we’ve observed and studied emerging natural resource shortages, environmental degradation, and vulnerability to hazards, we’ve allowed ourselves to turn into scolds. Worse, we’ve chosen sides politically, largely abandoning any pretense at nonpartisanship.”

For years, members of the Science and Environmental Policy Project (SEPP) have questioned the direction of federally-funded climate research with senior administrators of science entities, including the head of the National Science Foundation. The funding focused on human-caused global warming, excluding natural causes. When temperatures stopped rising, the term was politically shifted to climate-change, demonstrating a severe weakness in the government-funded science.

Based on government publications, SEPP calculated that, from FY 1993 to FY 2013, the US government spent over \$35 Billion on climate science. Yet, no major programs on understanding the natural causes of climate change (warming or cooling) were reported. This funding has created a biased science – one that ignores nature. (“Climate Fears and Finance”)

The current temperature plateau further demonstrates the biased science, with no increase in atmospheric temperatures for at least a decade (University of Alabama at Huntsville calculations), and up to 18 years with Remote Sensing Systems atmospheric calculations and Hadley-Climatic Research Unit surface calculations. Excuses for the plateau vary, but many include a natural cause, such as shifts in the Pacific Decadal Oscillation (PDO).

Shifts in the PDO from cooling to warming back to cooling have been known since the 1990s. Yet government-funded climate science fails to take it into account, demonstrating that government-funded climate science is obsolete.

For these reasons, SEPP suggests that all spending measures on climate science carry an amendment that 25% of the spending will be devoted on understanding the natural influences on climate. These measures could include the US Global Change Science Program, with 13 Federal departments and agencies participating, and with a FY 2014 enacted budget of \$2.490 Billion. By funding the natural causes of climate change, government can help create a more robust science, not one focused on a special case.

Please see links under Seeking a Common Ground and “Climate Fears and Finance”

http://www.sepp.org/key_issues/ClimateFearsandFinance9-7.pdf

GWPF: Thirteen members of the Academic Advisory Council of the Global Warming Policy Foundation (GWPF) wrote a response to *A Short Guide to Climate Science* by the Royal Society. The response is titled *The Small Print: What the Royal Society Left Out* and contains 20 points. As with all such efforts, there may be minor issues arising in the response, often relating to emphasis. Fred Singer may be preparing a critique, however, a few issues are presented below.

Under point 2, the response states: “The warming effect of greenhouse gases is widely recognized. However, the direct effect is known to be relatively small: about 1°C for a doubling of carbon dioxide levels.” The 1°C comes from experiments using dry air. The main issue is what happens in humid air, particularly over the tropics.

Under point 5, the response states: “Similarly, temperatures in the troposphere over the tropics are predicted to rise faster than anywhere else, including at the surface. This too is a matter of basic physics, where the temperature profile follows what is known as the moist adiabat. Models are, indeed, consistent with this. However, observed warming in the tropical troposphere is very weak compared to warming at the surface, suggesting problems with observations at the surface or in the troposphere or both. Given the small changes that are being studied, neither possibility is implausible.”

The comprehensive atmospheric measurements clearly show that warming over the tropics is not as intensive as suggested by the models or by surface measurements. The surface measurements are sparse and probably not correct.

Under point 18 the response states: “Scientists continue to address some of the unknowns regarding the climate system.” A main issue is the role of government funding in distorting the climate science. For example, there is no US funding for the natural causes of climate change.

The above points are minor, and we recognize the response is significant effort. See links under Challenging the Orthodoxy.

Cosmic Rays: Last week TWTW linked to a paper on cosmic rays by Tsonis, et al., using statistical techniques that were not compelling. Richard Lindzen quickly question the involvement of some of the co-authors. The *Washington Post* carried an article with the headline “No, cosmic rays aren’t causing global warming.” The hypothesis is stated backwards. The hypothesis is increased high-energy cosmic rays increase cloudiness, thus cause cooling.

The article also stated there was no correlation between cosmic rays and temperatures. Yet, the abstract states: “However, on short interannual timescales, we find a significant, although modest, causal effect between CR and short-term, year-to-year variability in global temperature that is consistent with the presence of nonlinearities internal to the system. Thus, although CR do not contribute measurably to the 20th-century global warming trend, they do appear as a nontraditional forcing in the climate system on short interannual timescales.”

In spite of the *Washington Post* article, the jury is still out. The time scales involved may be much longer than considered in the paper. Also, surface temperature measurements are questionable. See links under Communicating Better to the Public – Make things up.

Adjusting Surface Temperature Records: In discussing the extreme winter of 2014/15 for the East, Joseph D’Aleo of WeatherBell Analytics repeats why he continues to reference the Number of state Record High & Low Temperatures by Decade, as presented by John Christy in US House/Senate Testimony

“I have seen emails suggesting they [NOAA & NASA-GISS] would like to modify this inconvenient data set [record high & low temperatures] but they have no excuse to do it as the Time of Observation adjustment that does much of the adjustment (cooling early decades and warming later) is said to prevent double counting a high two straight days. For all-time records, this doesn’t matter. Homogenization, the other ‘blending’ trick also makes no sense when looking for record cold or warm records.”

Also, the 2014 US tornado year was contrary to White House claims. Please see links under Changing Weather.

Links: Last week several TWTW readers commented that they had difficulty with the links in the email they received. The email service modifies the links when TWTW is sent out. We have taken steps to simplify the procedure in an effort to reduce any such modification. In any case, if the links in the e-mail do not work, the links in the pdf on the SEPP web site should work

<http://www.sepp.org/the-week-that-was.cfm>

Number of the Week: 8.2%. Writing in Watts Up With That, earth scientist David Middleton demolishes the claim that 97% of climate scientists agree with human-caused global warming, used by the President and many others. According to Middleton, only 8.2% of the papers considered by Cook J. et al. (2013) explicitly endorsed human-caused global warming. For 66.73% there is no explicit or implicit position. Several authors have publicly objected to Cook et al. classifying their papers as implicit endorsement.

Writing in Environmental Research Letters, John Cook and Kevin Cowtan have produced a weak explanation. But, the damage has been done, and it is on-going. Such papers have discredited scientists and science in general. See links under Challenging the Orthodoxy and

Communicating Better to the Public – Exaggerate, or be Vague?

ARTICLES:

Please note that articles that are not linked or summarized here are reproduced in the Articles Section of the full TWTW that can be found on the web site under the date of the TWTW.

1. Climate Free Speech

Dissenters push back against political intimidation.

Editorial, WSJ, Mar 16, 2015

<http://www.wsj.com/articles/climate-free-speech-1426548714>

[SUMMARY: The editorial states: “The Congressional Democrats trying to smear climate skeptics are betting that the threat of a federal investigation will muzzle academics and companies that question their climate-change agenda. So a round of applause for those pushing back, providing the bullies a public lesson in the First Amendment.”

The editorial praises the response of CATO president John Allison, discussed in last week’s TWTW, Heartland Institute’s Joe Bast and Koch Industries lawyer Mark Holden, “who provided the politicians with a tutorial on his company’s right to free association.” The editorial also praises the efforts of the 11 Republicans on the Senate Environment and Public Works Committee, and the efforts of the American Meteorological Society and the American Geophysical Union.

The editorial concludes: “Democrats and their allies have failed to persuade Americans that climate change is so serious that it warrants sweeping new political controls on American energy and industry. So liberals are trying to silence those who are winning the argument. We’re glad to see the dissenters aren’t intimidated.”]

2. Fossil Fuels Will Save the World (Really)

There are problems with oil, gas and coal, but their benefits for people—and the planet—are beyond dispute

By Matt Ridley, WSJ, Mar 13, 2015

<http://www.wsj.com/articles/fossil-fuels-will-save-the-world-really-1426282420>

[SUMMARY: Partially summarized by Mark Perry under Challenging the Orthodoxy, Ridley starts with the statement: “The environmental movement has advanced three arguments in recent years for giving up fossil fuels: (1) that we will soon run out of them anyway; (2) that alternative sources of energy will price them out of the marketplace; and (3) that we cannot afford the climate consequences of burning them.”

Mr. Ridley proceeds to demolish all these arguments and concludes: “The one thing that will not work is the one thing that the environmental movement insists upon: subsidizing wealthy crony capitalists to build low-density, low-output, capital-intensive, land-hungry renewable energy schemes, while telling the poor to give up the dream of getting richer through fossil fuels.”]

3. Notable & Quotable: Environmental Religion

Environmentalism is a perfect 21st century remapping of traditional Judeo-Christian beliefs and myths.

By Michael Crichton, WSJ, 2003

<http://www.wsj.com/articles/notable-quotable-environmental-religion-1426456555>

[SUMMARY: The editorial repeats a portion of the writing of Michael Crichton:

Today, one of the most powerful religions in the Western World is environmentalism. Environmentalism seems to be the religion of choice for urban atheists. Why do I say it's a religion? Well, just look at the beliefs. If you look carefully, you see that environmentalism is in fact a perfect 21st century remapping of traditional Judeo-Christian beliefs and myths.

There's an initial Eden, a paradise, a state of grace and unity with nature, there's a fall from grace into a state of pollution as a result of eating from the tree of knowledge, and as a result of our actions there is a judgment day coming for us all. We are all energy sinners, doomed to die, unless we seek salvation, which is now called sustainability. Sustainability is salvation in the church of the environment. Just as organic food is its communion, that pesticide-free wafer that the right people with the right beliefs, imbibe. . . .

There is no Eden. There never was. What was that Eden of the wonderful mythic past? Is it the time when infant mortality was 80%, when four children in five died of disease before the age of five? When one woman in six died in childbirth? When the average lifespan was 40, as it was in America a century ago. When plagues swept across the planet, killing millions in a stroke. Was it when millions starved to death? Is that when it was Eden?]

4. Real Science Doesn't Squelch Dissent

Eisenhower: "public policy could itself become the captive of a scientific-technological elite."
Letters, WSJ, Mar 16, 2015

<http://www.wsj.com/articles/real-science-doesnt-squelch-dissent-letters-to-the-editor-1426438114>

[SUMMARY: Emeritus Professor Henry Bauer of VPI writes:

"Richard Lindzen describes accurately how critics of human-caused climate change are attacked personally while their substantive arguments are not answered ("The Political Assault on Climate Skeptics," op-ed, March 5). It remains to be noted that this sort of thing is far from unique. What President Dwight Eisenhower warned against has come to pass: "In holding scientific research and discovery in respect, as we should, we must also be alert to the equal and opposite danger that public policy could itself become the captive of a scientific-technological elite."

"The mainstream consensus controls funding and publication and "peer review" excludes competent minority views on a wide range of topics. On matters like "global warming" that involve public policies and significant public expenditures, the attacks on those who disagree are particularly vicious."

[SEPP Comment: Another example of "pal review" of 21st century works used to invoke the fear of global warming.]

Suppressing Scientific Inquiry – The Witch Hunt

Global warming snipe hunt

Certain Democratic senators are in hot pursuit of heretics

Editorial, Washington Time, Mar 16, 2015 [H/t Timothy Wise]

<http://www.washingtontimes.com/news/2015/mar/16/editorial-democrats-seek-out-global-warming-resear/>

[SEPP Comment: Snipe hunts are for a mythical bird.]

Suppressing Scientific Inquiry – The Witch Hunt – Push-Back

A Thank You to Rep. Raul Grijalva, Narrative Killer

By Roger Pielke, Jr. His Blog, Mar 16, 2015 [H/t GWPF]

<http://rogerpielkejr.blogspot.co.uk/2015/03/a-thank-you-to-rep-raul-grijalva.html>

"As I have often written, there is no "war on science" being conducted by Republicans or by Democrats. There is however plenty of politics. Politics can be conducted in ways that contribute to common interests, or in ways that are pathological. The science community has tried the latter for a decade. It is time to move beyond the toxic partisanship of the most recent science wars. Oddly enough, Rep. Grijalva's overreach helps us to move in that direction."

Climate expert John Christy on funding: 'No one is paying me to have my view'

By Paul Gattis, AL.com, Mar 18, 2015 [H/t GWPF]

http://www.al.com/news/huntsville/index.ssf/2015/03/climate_expert_john_christy_on.html

"My response is that I don't see anything in this letter that challenges the science we produce," he said. "So therefore, it should not matter where support came from to produce that science. (The Obama) administration believes that if you don't agree with them about climate change, you must be being paid to have that opinion."

[SEPP Comment: Another great graph showing the increasing disparity between model projections and observations in the atmosphere.]

University of Delaware defends Legates against witch hunt

IEA: For First Time in 40 Years, World Energy Sector GHG Emissions Stalled in 2014 [without an economic slowdown]

By Sonal Patel, Power Mag, Mar 18, 2015

http://www.powermag.com/iea-for-first-time-in-40-years-world-energy-sector-ghg-emissions-stalled-in-2014/?hq_e=el&hq_m=3046898&hq_l=17&hq_v=5e660500d0

“IEA Chief Economist Fatih Birol, recently named to take over from Maria van der Hoeven as the next IEA executive director, said the finding “provides much-needed momentum to negotiators preparing to forge a global climate deal in Paris in December: For the first time, greenhouse gas emissions are decoupling from economic growth.”

[SEPP Comment: From this brief period we can establish long-range government policies?]

Questioning the Orthodoxy

Atlas Shrugged, Net Neutrality, and Government Controlled Science

By Roy Spencer, Global Warming, Mar 19, 2015

<http://www.drroyspencer.com/2015/03/atlas-shrugged-net-neutrality-and-government-controlled-science/>

“Even we admit that humans have some influence on climate. But (1) the human portion is highly uncertain, and (2) we can't do anything significant about it anyway without killing millions of people in the process.”

Supporting document for Canada's polar bear status maps reveal surprises

[SEPP Comment: Video. Links to an audio interview with Ball stating what he was not allowed to say in the debate.]

Review of Recent Scientific Articles by CO2 Science

Warm Biases and Climate Change Amplification in CMIP5 Models

Cheruy, F., Dufresne, J.L., Hourdin, F. and Ducharne, A. 2014. Role of clouds and land-atmosphere coupling in midlatitude continental summer warm biases and climate change amplification in CMIP5 simulations. *Geophysical Research Letters* **41**: 6493-6500., Mar 18, 2015
<http://www.co2science.org/articles/V18/mar/a17.php>

“Continuing to quote the authors, "the above deficiencies of the present climate simulations impact future climate projections," in that "the same feedback mechanisms identified for the warm-biased areas for the present climate are in play for future climate projections," which unfortunate state of affairs can artificially amplify predicted climate warming at regional scales.”

Ocean Acidification (Effects on Marine Animals: Bivalves) – Summary

By Staff Writers, CO2 Science, Mar 16, 2015

<http://www.co2science.org/subject/o/summaries/acidbivalves.php>

“In summation, based on the findings presented above there are ample reasons to reject the conclusion of acidification alarmists, who contend that future reductions in oceanic pH will most assuredly be negative and decimate bivalves. In contrast, a growing number of studies reveal ocean acidification to be much less of a problem, or no problem at all, for these marine species.”

A 1951-2009 History of Conterminous U.S. Streamflow

McCabe, G.J. and Wolock, D.M. 2014. Spatial and temporal patterns in conterminous United States streamflow characteristics. *Geophysical Research Letters* **41**: 6889-6897. Mar 14, 2015
<http://www.co2science.org/articles/V18/mar/a14.php>

“In light of their several findings, McCabe and Wolock conclude that ‘most of the temporal variability in flow is unpredictable in terms of relations to climate indices,’ and they thus infer that, ‘for the most part, future changes in flow characteristics cannot be predicted by these indices.’ And that is bad news for climate alarmists who continue to insist that CO2-induced global warming is causing (or will cause) more frequent and more severe streamflow trends.”

Modeling the Mid-Holocene Atmospheric Circulation of Europe

Mauri, A., Davis, B.A.S., Collins, P.M. and Kaplan, J.O. 2014. The influence of atmospheric circulation on the mid-Holocene climate of Europe: a data-model comparison. *Climate of the Past* **10**: 1925-1938. Mar 12, 2015

<http://www.co2science.org/articles/V18/mar/a12.php>

“In terms of both the old and the new, therefore, today's climate models would appear to be unable to accurately describe reality in the case of atmospheric circulation over Europe.”

Models v. Observations

German Meteorologist Says Climate Models Have Gotten 11 Of The Past 12 European Summers Wrong!

Ponds are disappearing in the Arctic

By Staff Writers, El Paso TX (SPX) Mar 16, 2015

http://www.spacedaily.com/reports/Ponds_are_disappearing_in_the_Arctic_999.html

Link to paper: Disappearing Arctic tundra ponds: Fine-scale analysis of surface hydrology in drained thaw lake basins over a 65 year period (1948-2013)

By Christian G. Andresen¹ and Vanessa L. Lougheed, Journal of Geophysical Research, Feb 12, 2015

<http://onlinelibrary.wiley.com/doi/10.1002/2014JG002778/abstract;jsessionid=FDEC9C176F124F5591EE69634BC76000.f01t01>

“The team points to warming temperatures and encroaching plants as one of the reasons the ponds are disappearing. As temperatures rise, nutrient-rich permafrost - a frozen layer of soil - thaws, releasing nutrients into ponds and enhancing plant growth.”

[SEPP Comment: Will the plants eat the feared greenhouse gas release from the permafrost?

Perhaps they did 5,000 to 8,000 years ago when the Arctic was considerably warmer than today.]

Freezing Cold War: Canada to Spend Billions on Arctic Military Gear

By Staff Writers, Moscow (Sputnik), Mar 18, 2015

http://www.spacewar.com/reports/Freezing_Cold_War_Canadato_Spend_Billions_on_Arctic_Military_Gear_999.html

Acidic Waters

Naturally acidic waters of Puget Sound surround UW's Friday Harbor Labs

By Staff Writers, Seattle WA (SPX), Mar 17, 2015

http://www.terraily.com/reports/Naturally_acidic_waters_of_Puget_Sound_surround_UWs_Friday_Harbor_Labs_999.html

“In other words, Puget Sound's water is already higher in the gas than our CO₂-choked atmosphere.”

[SEPP Comment: Another objective article?]

Agriculture Issues & Fear of Famine

More food from less land

By Matt Ridley, Rational Optimist, Mar 15, 2015

<http://www.rationaloptimist.com/blog/more-food-from-less-land.aspx>

“There were only two localised famines last year — in South Sudan and the Central African Republic — both caused by conflict, rather than drought or population pressure. That’s because the feeding of the world is going so well, it’s not news.”

Un-Science or Non-Science?

Claim: computer model says thawing permafrost will run a lopsided carbon game in the Arctic

By Anthony Watts, WUWT, Mar 19, 2015

<http://wattsupwiththat.com/2015/03/19/claim-computer-model-says-thawing-permafrost-will-run-lopsided-carbon-game-in-the-arctic/>

[SEPP Comment: Why didn't the thawing permafrost release all that CO2 5,000 years ago when it was warmer than today?]

Lowering Standards

The environment correspondent's standards

Green Energy Causes Record Spike In Electricity Prices

By Michael Bastasch, Daily Caller, Mar 16, 2015

<http://dailycaller.com/2015/03/16/green-energy-spike-electricity-prices/>

Link to EIA report: Growth in residential electricity prices highest in 6 years, but expected to slow in 2015

By Staff Writers, EIA, Mar 16, 2015

<http://www.eia.gov/todayinenergy/detail.cfm?id=20372&src=email>

[SEPP Comment: The rate of price increases may slow, but not decrease the price.]

Non-Green Jobs

EU Slipping on Economic Competitiveness, Employers Say

By Rebecca Christie, Bloomberg, Mar 16, 2015 [H/t GWPF]

<http://www.bloomberg.com/news/articles/2015-03-16/eu-slipping-on-economic-competitiveness-employers-say>

Lord Deben and the bureaucratic mindset

By Andrew Montford, Bishop Hill, Mar 19, 2015

<http://bishophill.squarespace.com/blog/2015/3/19/lord-deben-and-the-bureaucratic-mindset.html>

[SEPP Comment: As opponents to the Britain's clean energy policies predicted, jobs are being exported to China. Now the greens are claiming that the emissions resulting from these exported jobs should be counted as British emissions!]

Funding Issues

The Price Is Right, the Letters Are Wrong, and Climate Research Is Booming

By Patrick J. Michaels and Paul C. "Chip" Knappenberger, CATO, Mar 16, 2015

<http://www.cato.org/blog/you-ought-have-look-price-right-letters-are-wrong-climate-research-booming>

The Political Games Continue

House passes bill to overhaul EPA Scientific Advisory Board

By Cristina Marcos, The Hill Mar 17, 2015

<http://thehill.com/blogs/floor-action/house/235988-house-passes-bill-to-overhaul-epa-advisory-board>

McConnell to states: EPA climate rule is illegal

By Timothy Cama, The Hill, Mar 19, 2015

<http://thehill.com/policy/energy-environment/236356-mcconnell-to-states-epa-climate-rule-is-illegal>

Republican chairman says EPA has 'muzzled dissenting voices'

By Timothy Cama, The Hill, Mar 17, 2015

<http://thehill.com/policy/energy-environment/235951-lawmakers-question-benefits-of-epa-ozone-rule>

[SEPP Comment: The defenders of the rule say it would significantly reduce respiratory problems, including asthma attacks. Yet asthma attacks have been increasing after prior rules went into effect. Does clean air cause asthma?]

Republicans seek to push climate change off national security agenda

By Andrew Freedman, Mashable, Mar 18, 2015

<http://mashable.com/2015/03/17/republicans-national-security-global-warming-spending/#:eyJzIjoidCIiImkiOiJfOXFtd2ZkZDJoc3prdDN4MyJ9>

[SEPP Comment: Note to the national security experts at the Pentagon and CIA: World Wars I and II broke out during a period of global warming (1910 to 1940). Did global warming cause these wars?]

Litigation Issues

The Obama Administration's Attack on the Constitution: Part 2, Environmental Protection Agency

[SEPP Comment: Abuse of power!]

House passes bill to ban EPA 'secret science'

By Timothy Cama and Cristina Marcos, The Hill, Mar 18, 2015

<http://thehill.com/blogs/floor-action/house/236132-house-passes-bill-to-prevent-epa-secret-science>

Don't close the door on open science

By Amanda D. Rodewald, The Hill, Mar 18, 2015

<http://thehill.com/blogs/pundits-blog/energy-environment/236001-dont-close-the-door-on-open-science>

“if the Secret Science Reform Act is enacted, the EPA may be further prevented from considering studies that cannot be reproduced,”

[SEPP Comment: What is open about science, which is kept secret? Studies with unique results should not be used for policy and regulations. Further, the public should be able to review the quality of the research, which it cannot, with some studies the EPA uses.]

States should defy unlawful EPA carbon dioxide rules

The Clean Power Plan will raise electricity prices and reduce grid reliability, while providing negligible environmental benefits.

By Steve Goreham, Communities Digital News, Mar 18, 2015

<http://www.commdiginews.com/business-2/economics-economy/states-should-defy-unlawful-epa-carbon-dioxide-rules-38139/>

Energy Issues – Non-US

German Wind Power Goes Completely AWOL For The 11th Time This Year...Fossils, Nuclear Again To The Rescue!

By P Gosselin, No Tricks Zone, Mar 20, 2015

<http://notrickszone.com/2015/03/20/german-wind-power-goes-completely-awol-for-the-11th-time-this-year-fossils-nuclear-again-to-the-rescue/#sthash.LNla61Lg.dpbs>

[SEPP Comment: The expected solar eclipse did not give the expected problems, thankfully. Otherwise the wind eclipse would have been worse.]

Energy Issues -- US

Why OPEC Can't Kill The U.S. Shale Boom

By Matt Egan, CNN Money, Mar 17, 2015

<http://thehill.com/policy/energy-environment/236429-drillers-file-lawsuit-to-challenge-fracking-rules>

Feds sell nearly 1 million acres for Gulf offshore drilling

By Timothy Cama, The Hill, Mar 18, 2015

<http://thehill.com/policy/energy-environment/236135-feds-sell-nearly-1-million-acres-for-gulf-offshore-drilling>

“Abigail Hopper, director of the Interior Department’s Bureau of Ocean Energy Management (BOEM), which oversaw the auction, said the sale shows strong interest in offshore drilling despite the six-year low in oil prices worldwide. .. Nonetheless, the 195 bids submitted were the lowest from a single sale since 1986.”

[SEPP Comment: Lower oil prices and high costs of regulations do have an effect.]

Federal Land Regulation Continues to Strangle Energy Production...
